

DUX Asphalt Grid on Netball Court

In January 2020 contractor Patches Asphalt proposed rehabilitation of an old netball court at Queanbeyan using DUX 50/50-25 Asphalt Grid prior to an asphalt overlay. The existing old, oxidised asphalt surface was in very poor condition with extensive crocodile cracking as well as severe cracking at the panels joints of the underlying concrete base. From past experience Patches Asphalt knew DUX Asphalt Grid offers the best performing and most cost effective treatment to reduce reflective cracking into the new asphalt. Installation is fast and simple to install using a light 0.6L/sqm emulsion tack coat. The new asphalt overlay is laid immediately directly on the grid. Call Southern Geosynthetics on 1300 069 394 for full details.
