

Cavendish Street, Broadmeadows May 2021

Tony Presta at Presta Constructions is well known for doing top quality work, so when Tony approached SGS for the best way to prevent reflective cracking through new asphalt we suggested “Roadgrid”. Cavendish Street had severe localised cracking along service trenches and lane widening works, and the 500mm wide geogrid-reinforced tape is ideal for treating these areas. Just “peel & stick” for a rapid, cost-effective solution.
