

# Terravault Treepit Modules

## Wangaratta Rail Precinct

Major streetscape works are nearing completion at the Wangaratta Rail Precinct. As part of a complex works package contractor Excell Gray Bruni is installing Terravault modules to provide structural soil support around new tree plantings. The modules provide a strong, open structure for the tree roots to growth through, without damaging surrounding pavement. The contractor liked the speed and ease of construction of Terravault, and ability to accomodate services through the modules.
