

Bike Path Resurfacing with DUX Asphalt Grid

DUX 50/50-25
Asphalt Grid

Finished asphalt overlay at bike track near Galen College. Note DUX grid at pavement edge

DUX asphalt grid laid with light tack coat

There is nothing like the crackling sound of freshly laid asphalt! Ensure your bike path achieves its' design life by including a layer of DUX asphalt grid in the overlay. DUX 50/50-25 is a specially designed polyester geogrid, combined with an ultralight PP non-woven that intercepts and deters reflective cracking. Recent bike path projects at Shepparton and Wangaratta show the word is spreading.

Old cracked bike path along Broken River Drive, Shepparton
