CGM050/200DS Geocomposite Liner

Netball, hockey and soccer fields are being built as part of the new World Sporting Precinct at Bairnsdale. A geocomposite liner is being installed at the base of the pavement by Cranes Civil & Surfacing to control subgrade moisture. CGM050/200DS is a geocomposite liner comprising a 0.5m LDPE liner bonded either side to 200gsm non-woven geotextiles. The composite structure results in a super-tough liner, and the 5.9m wide rolls cover large areas with minimum seams.

Installing CGM050/200DS at subgrade
